

D-TYPE MICRO MATIC KEG COUPLER SERVICE TIPS

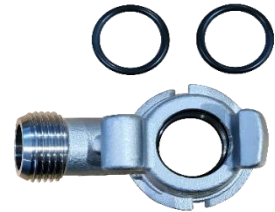

SERVICE KIT # 35781512

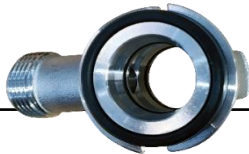

1. Unclip handle hinge pin (#35654034) & slide off. Slide handle (#35654022) back to remove.

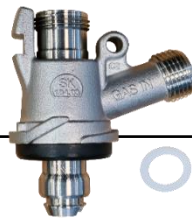

2. Remove the white gasket probe seal (#35122164) with O-ring pick to allow removal of probe. Push probe from gasket end out of the top of the keg coupler body.

3. There are **2x** O-rings (#350000052) in the body of the keg coupler. Remove these with your **O-ring pick** & replace. Use small amount Kluber grease on O rings.

4. The last seal to change on the D-Type keg coupler is the base seal (#79700996) on the bottom of the coupler. The flat face of the seal to be located against the body

5. Re-assemble - Insert probe into the keg body (gasket end first). Once probe is in the keg coupler body, fit a new "white" gasket probe seal (#35122164).

6. If the "white" gasket probe seal is fitted before putting the probe into the coupler, it will **NOT** go back together.

7. Replace the probe by inserting the threaded end of the probe into the body of the coupler & slide in as shown above.

8. Push in the hinge pin & fasten in place. You have now serviced your D-Style Keg Coupler.

D Type Service Kit - 35781512
